

CANDIDATE ID: CV10 | LEVEL: INTERMEDIATE (SEMI-SENIOR) | PROFILE: DevSecOps / Cloud Security Engineer

PROFESSIONAL SUMMARY

DevSecOps Engineer with 5 years of experience integrating security practices into software delivery pipelines and cloud infrastructure. Expertise in cloud security posture management (CSPM), infrastructure-as-code security, container security, and vulnerability management automation. Experience bridging development, operations, and security teams in large-scale cloud-native environments (AWS and Azure). Growing knowledge of network security and SASE integrations to secure cloud workload access and inter-cloud connectivity.

EDUCATION

Bachelor of Science in Computer Engineering

Graduation Year: 2018

Specialization Certificate in Cloud Security Architecture (Online)

Completed: 2021

WORK EXPERIENCE

Senior DevSecOps Engineer

Multinational Software Company | May 2021 – Present (3 years)

- Designed and implemented security controls across AWS multi-account environments using AWS Organizations, SCPs, and account-level security baselines.
- Automated security scanning in CI/CD pipelines using Snyk, Checkov, OWASP ZAP, and SonarQube; integrated findings into GitHub Actions and GitLab CI.
- Managed Prisma Cloud (CSPM) deployment covering 300+ cloud accounts across AWS and Azure, achieving 85%+ compliance with CIS Benchmarks.
- Implemented container image scanning and admission controls in Kubernetes using Trivy and OPA Gatekeeper.
- Built custom AWS Lambda functions for automated remediation of cloud misconfigurations (e.g., auto-encrypt unencrypted S3 buckets, revoke overly permissive security groups).
- Integrated SIEM (Splunk) with cloud security telemetry: CloudTrail, GuardDuty, Security Hub, and Azure Sentinel.
- Participated in security architecture reviews for new product features.
- Conducted internal training on secure coding and cloud security for 40+ engineers.

Cloud Security Engineer (L2)

E-commerce Platform | Aug 2018 – Apr 2021

- Managed AWS security configurations for a 200-microservice environment.
- Implemented IAM policies, KMS key management, and VPC flow logs.
- Responded to GuardDuty findings and coordinated remediation with DevOps teams.
- Conducted threat modeling for new application features using STRIDE methodology.
- Deployed and managed WAF rules on AWS WAF and Cloudflare.

TECHNICAL SKILLS

Cloud Security: AWS (IAM, GuardDuty, Security Hub, Config, CloudTrail, Macie, WAF, Inspector) — Expert

Azure (Defender for Cloud, AAD, Policy, Sentinel) — Intermediate

CSPM: Prisma Cloud (advanced), Lacework (intermediate),

AWS Security Hub (advanced)

IaC Security: Terraform (advanced), Checkov, tfsec, Sentinel policies

Container Security: Docker, Kubernetes, Trivy, Falco, OPA/Rego, Helm

CI/CD Security: GitHub Actions, GitLab CI, Jenkins, Snyk, Dependabot

SAST/DAST: SonarQube, Semgrep, OWASP ZAP, Burp Suite (basic)

Languages: Python (advanced automation), Bash, Go (basic)

Networking: VPC design, PrivateLink, Transit Gateway, NACLs, SGs
SIEM Integration: Splunk, AWS Security Hub, Azure Sentinel
Frameworks: CIS Benchmarks, NIST CSF, SOC 2, OWASP

SOFT SKILLS

- Strong ability to collaborate between security, dev, and ops teams
 - Automation-first mindset for scalable security solutions
 - Clear and concise technical documentation and knowledge sharing
 - Pragmatic risk-based approach to security decisions
 - Ability to prioritize security work in fast-paced delivery environments
 - Enthusiasm for mentoring developers in security best practices
-

CERTIFICATIONS

- AWS Certified Security – Specialty — 2020
 - AWS Certified Solutions Architect – Professional — 2021
 - Certified Kubernetes Security Specialist (CKS) — 2022
 - Certified Cloud Security Professional (CCSP) — 2021
 - GIAC Cloud Security Automation (GCSA) — 2023
-

LANGUAGES

- English: Full professional proficiency (C1)
 - Spanish: Native
 - German: Basic (A2)
-

RELEVANT PROJECTS

Project 1: Multi-Cloud Security Baseline Automation (2022)

Built a GitOps-based security baseline automation system deploying security controls across 300+ AWS and Azure accounts. Reduced time to secure a new account from 2 days to 20 minutes. Covered IAM, logging, monitoring, and encryption standards.

Project 2: Kubernetes Security Hardening (2022)

Led security hardening of a 50-node EKS cluster handling 5M daily requests. Implemented PodSecurityAdmission, OPA Gatekeeper policies, Falco runtime monitoring, and network policies. Reduced attack surface score by 60% per internal assessment.

Project 3: Secure Access for Cloud Workloads via SASE (2023)

Collaborated with the network team to integrate cloud workload egress traffic through a SASE platform (Netskope), enabling DLP and web filtering policies for cloud-native services without legacy proxy infrastructure.

NOTE: This is a synthetic CV generated for academic research purposes. Personal identifiers (name, photo, gender, age, nationality, marital status) have been intentionally omitted to protect candidate privacy and ensure bias-free evaluation.
